

## Six TMB 400-S special tying machines for a South Korean rebar mill

ATS will deliver the first packet of six TMB400-S (single turns) tying machines to the Asian market, specifically to a bar rolling mill in South Korea.

The TMB400 for bundles with a maximum diameter of 400mm has been engineered to wrap the finished product in a single turn, speeding up site operations.

By enabling appropriate allocation in all production settings, the ergonomic dimensions will enable the fastest binding cycle on the market.

The outcome will even affect a reduction in manual intervention expenses as well as an increase in workforce health and safety.

*ATS will incorporate this new model, as well as another revision of the TMB400, into the package of solutions offered in the coming period: TMB 400-45.*
